

Table 1 Number of *An. arabiensis* pupae that eclosed for every 100 individuals raised on either crushed silver cyprinid fish or Tetramin® Baby fish in their larval stages and the proportions of adult mosquitoes emerging from the pupae.

Diet type	Proportions of emerging adult mosquitoes			
	Pupae	Females	Males	<i>P</i>
Crushed silver cyprinid fish	96 <sup>b</sup>	0.44	0.56	0.267
Tetramin® Baby fish food	96 <sup>b</sup>	0.49	0.51	0.427

Note: 1 Rows with number of pupae superscripted with the same letters don't differ significantly; *P* represents the probability for the level of significance.
